Test Description :

A Bichard7 Regression Test verifying Identical Offence Matching where Results received are identical but are in a different order for each of the 100 Offences. Specifically:- 100 identical Offences and Results are received from Court but the Court Results for each Offence appear in a different order
The solution recognises the Offences and their associated results as identical (irrespective of how the results for each Offence have been ordered) and an update to the PNC is successfully generated.
Pre Update Triggers are created on the Portal.
