Test Description :

A Bichard7 Regression Test verifying Offence Matching and Exception generation. Court Hearing results are sent through the CJSE and onto Bichard7. Hearing Outcome XML is successfully created based on ResultedCaseMessage contents, successful queried response from PNC and also from static data

tables held within the Exchange-hosted solution. PNC Update is NOT generated as the solution recognises a mismatch between those Offences received from Court and those on the PNC - in this case no Offence received from Court matches those held against the Impending Prosecution Record on the PNC. An Exception is also successfully created and manually resolved via the Portal.
