therefore used to automate updates to the PNC through the BR7 solution.

Test Description :

A Bichard7 Regression Test verifying Court Results automation (Adjournment with Judgement & Judgement with Final Result) and the stripping of Adjudication values received from the Court for specific Result Codes. Court Hearing results are sent through the CJSE and onto Bichard7 where Offences have been 'Heard at Court', 'Carried Forward to Court Case' or 'Replaced With Another Offence' (Result Codes 2059 & 2060). Hearing Outcome XML is successfully created based on ResultedCaseMessage contents, successful queried response from PNC and also from static data tables held within the Exchange-hosted solution. PNC Update is generated and the Court Hearing Results are successfully added automatically onto the PNC. The solution will strip the Adjudication values received from Court in order for the update to be considered acceptable to the PNC. Post Update Triggers are also successfully created on the Portal.
