Test Description :

A Bichard7 Regression Test verifying Breach Offence handling where a mismatch of Offence Dates exists, Results automation (Judgement with Final Results) and Trigger generation. Court Hearing results are sent through the CJSE and onto Bichard7. Hearing Outcome XML is successfully created based on ResultedCaseMessage contents, successful queried response from PNC and also from static data tables held within the Exchange-hosted solution. The Offence Start and End Dates for the single Breach Offence received from Court are ignored and not used to update the PNC (for Breach Offences there is no legal offence date and Libra sends the Court Date over the SPI interface). PNC Update is generated and the Court Hearing Results are successfully added automatically onto the PNC. Pre Update Triggers are also generated.
