#### Test Description:

A Bichard7 Regression Test verifying multiple CCR Group Results automation where Offences are Added In Court and 1 of the CCR Groups has an Adjudication. Specifically: The following Results are received from Court for an Impending Prosecution Record comprising 3 CCR Groups

- Message 1: All Offences for CCR Groups 1 & 2 = Judgement With Final Result,

PNC Update is generated and the Court Hearing Results are successfully and automatically added onto the PNC.

Pre Update Triggers are created on the Portal.

- Message 2: All Offences for CCR Group 3 = Adjournment With Judgement, Offences also Added In Court

The solution recognises that the Offences Added In Court should only be added to the CCR Group without an Adjudication.

PNC Update is generated and the Court Hearing Results are successfully and automatically added onto the PNC (including the Offence Added In Court). Post Update Triggers are created on the Portal.
