Test Description :

A Bichard7 Regression Test verifying Multiple CCR Group handling and Exception generation. Court Hearing results are sent through the CJSE and onto Bichard7. Hearing Outcome XML is successfully created based on ResultedCaseMessage contents, successful queried response from PNC and also from static data tables held within the Exchange-hosted solution. PNC Update is NOT generated as the solution recognises that 3x CCR Groups (a limitation with the PNC interface) are present on the PNC. An Exception is successfully created and Pre Update Triggers are also generated.
