Test Description :

A Bichard7 Regression Test verifying Offence Matching where Offence Code 'Qualifiers' (i.e. ABCI variants) are received from Court. Specifically: – Message 1: Initial Court Results include an invalid ASN. An Exception created on the Portal which is corrected, resubmitted and matched with an existing Impending Prosecution Record on the PNC. The Offence from Court includes an Offence Qualifier (in this case "TH68011C") and this is not matched with the details of the Defendant on the PNC. An Exception is created to identify manual resolution as required.
– Message 2: Initial Court Results include an invalid ASN. An Exception created on the Portal which is corrected, resubmitted and matched with an existing Impending Prosecution Record on the PNC. The Offence from Court includes an Offence Qualifier (in this case "TH68011A") and this is not matched with the details of the Defendant on the PNC. An Exception is created to identify manual resolution as required.
